

Drilling pattern recommended for PCB mounted jacks.
This pattern suits the Rixen PCB template

Drilling pattern recommended for off board jacks.
This pattern is optimised for 16mm x 16mm body jacks to fit between two circuit boards

Drill to required diameters. Dimensions in mm

Note that 20mm diameter body jacks do not provide adequate clearance when both circuit boards are fitted. These jacks may be used when only one board is fitted, using pattern A for boards fitted in the upper position and pattern B for boards fitted in the lower position. Location of the DC power jack, if used, will need to be determined from the space available
